OVER
35 YEARS IN BUSINESS

The CoreWord™ Language System

The CoreWord Language System provides augmentative and alternative communication (AAC) users with a powerful combination of core language, fringe vocabulary and banks of key phrases. Four distinct levels, **CoreWord 6, 20**, **40** and **60,** correspond with vocabulary layouts and content derived from studies of individuals using AAC across their lifespan. Levels increase from words most frequently used by emergent communicators to more complex content, grammar tools and rate enhancement features.

The words you need, right at your fingertips!

The **CoreWord Language System** features *dynamic vocabulary layouts* with syntactic predictability – the page automatically changes as a user makes selection. CoreWord's highly predictive nature ensures maximum efficiency with a minimal learning curve.

COREWORD™

Designed to promote language development

Consistency fosters learning

- Fitzgerald color coding organizes vocabulary for easy word location
- Consistent cell locations promote motor planning
- Cell shapes denote function
- Guided by Brown's Stages of Language Development

CoreWord makes AAC fun and functional

Each CoreWord level incorporates activities and accessible features that motivate and enable users to engage with their device, like:

- **Interactive learning activities** Animated grids promote establishment of cause and effect and develop choice making, matching and problem solving
- **Keyguard-friendly organization** Optimal for use with our SnapLock™ keyguards
- **Support for all access methods** Including touch, head mouse, switch scanning and eye tracking

FORBES AAC
