

Learning through PLAY!

The perfect speech generating device accessory.

The Language Development Kit

Children can learn to use their speech generating device to acquire language through natural and motivating experiences and there's nothing more natural and motivating to a child than PLAY!

With **play-based learning** in mind, Forbes AAC has created **Language Development Kits** as a companion accessory to your speech generating device. Using play-based motivators and professionally developed Clinical Protocols, the development kits create a systematic pathway to language acquisition. Users can interact and control sensory toys using touch, switch, head mouse or even eye-tracking access.

Forbes AAC

181 Illinois Ave. South
Mansfield, OH 44905

phone 419.589.7688

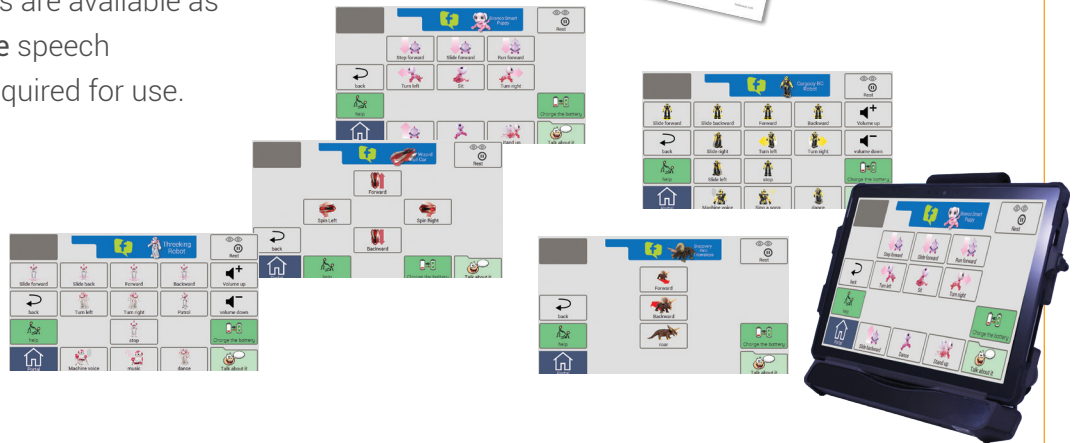

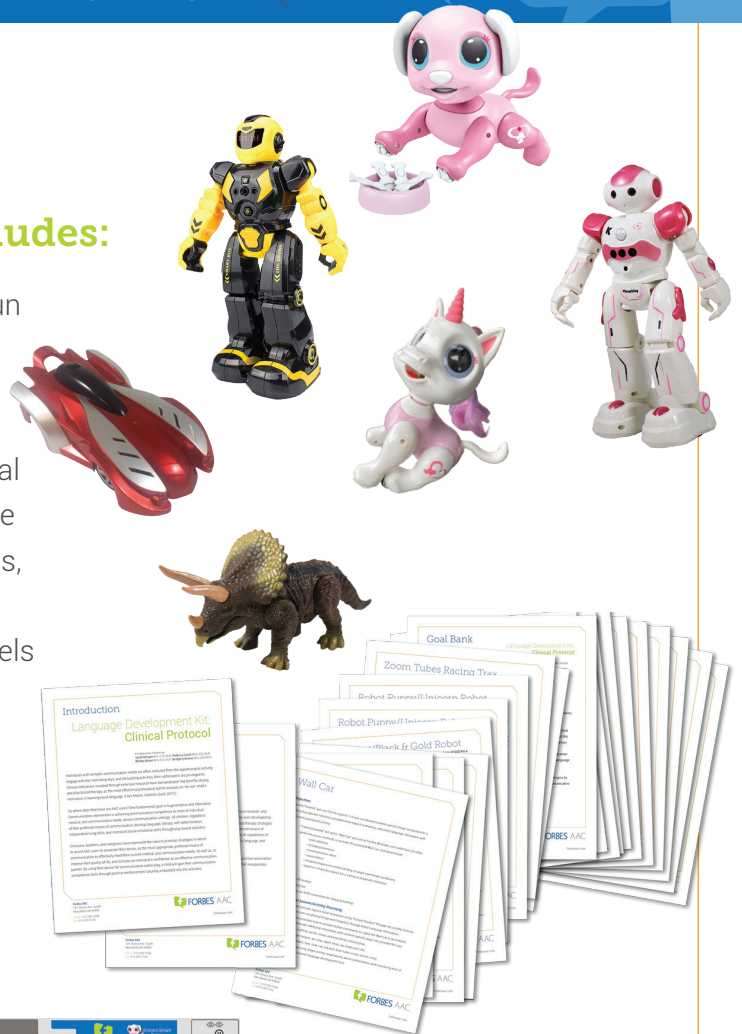

fax 419.589.5146

The Language Development Kit includes:

- **Interactive sensory toys** - choose from the seven, fun options to the right.
- **Clinical Protocols** - Developed by Speech and Language Pathologists who specialize in AAC, Clinical Protocols provide a systematic approach to language acquisition using AAC. Protocols include lesson plans, goal banks, and data tracking sheets. By using the Clinical Protocol, clinicians will experience higher levels of language acquisition through AAC intervention.
- **Ready-to-use Gridsets** - Professionally developed, WinSlate compatible gridsets specific to each activity. Gridsets are fully programmed with infrared commands and activity specific vocabulary for use with the Clinical Protocols.

Language Development Kits are available as accessories to the **WinSlate** speech generating device, and is required for use.
